

# THE NUREVA™ SPAN™ SYSTEM

The Nureva Span visual collaboration system transforms a wall into an expansive, digital workspace. The system combines a solid-state-illumination (SSI) projector with an intuitive cloud-based canvas that's projected onto a wall and simultaneously accessible from personal devices. Users can create, share and edit ideas and information by working directly on the wall or on their own computers, tablets and smartphones. QuickShare also lets contributors without a Span subscription add notes and images to a canvas. All changes made are instantly visible to all users.

The system's flexible components enable users to create a variety of panoramic, surround or mobile environments. For teams that need to be immersed in visual data, the system replaces the sticky-note wall, enabling real-time ideation, design, planning and other activities. For students, the system fosters active collaboration through sharing and organizing ideas to create deeper understanding. For everyone, the Span system opens up limitless possibilities for groups to create and collaborate.

## TRUE COLLABORATION

The Span system brings all the convenience and flexibility of today's online and touch technologies to traditional, paper-based collaboration. Visualizing information on a large surface is an intuitive way for people to work together, and Nureva adapts this proven process to the digital age. Using the Span system, groups

can work on a wall as they've always done, filling it with digital sticky notes, images and other objects to visualize information. The expansive virtual workspace makes it easy to see lots of information at once, identify patterns and start formulating solutions. And because there's no limit to the number of canvases you can create, there's endless space to explore possibilities and iterate.

At a time when many schools, businesses and other organizations are strapped for space, the system frees up valuable real estate and even creates flexible workspace that can be used by multiple groups of people for myriad projects. It's ideal for bringing technology to unused corners, huddle rooms, staff rooms, hallways, learning commons, kitchens and other nontraditional spaces.

## WORKING IN THE CLOUD

With cloud-based Span software, true collaboration that engages every team member is finally possible. Everyone – both in the room and working from a distance – can see all the material and contribute in real time, meaning the whole group benefits from everyone's perspectives. Users can develop deeper understanding of the material and arrive at new ideas faster. Because all work happens in the cloud, it's always available. Users trade the impermanence of paper for the persistence of digital data. Canvases are always up to date and accessible. There's no paper footprint, and in business, no need for costly travel or waiting to get team members in the same room.

## HOW IT WORKS

Software features preserve the best part of familiar paper-based processes – such as sticky notes, images, sketches and flip-chart pages. Dispersed teams work together seamlessly in real time with everyone able to contribute to a canvas. With screen sharing, information from multiple live applications can be shared in one place. Canvases are automatically saved and can be easily exported at any time as PDF or Excel® files.

In education, the Span system creates more opportunities for student-led learning and nurtures the development of skills such as creativity, critical thinking, collaboration and communication.

## WHY IT WORKS

Everyone has the space to contemplate and then prepare input and thoughts before a collaborative session just as they would with sticky notes and a pen. But they can also capture and share a variety of other digital inputs in advance or dynamically with their team. Seeing a lot of information and data at one time assists in many work and learning situations. The system's fully interactive SSI projectors (choose either the ultrawide 16:6 or full-HD 16:9) can be linked together to create a panoramic workspace that makes it easy to organize content. This rich combination of visualization and interaction fuels creativity and collaboration.

## SYSTEM BENEFITS

**Everyone can contribute** – capture everyone's ideas and input anonymously

**Familiar tools** – contribute ideas and information using notes, sketches, flip charts, text boxes, images, hyperlinks and templates

**Time to contemplate and space to prepare** – enrich collaboration through individual preparation

**QuickShare mode** – enable participants without a Span subscription to share content

**Expansive workspace** – broaden possibilities with a large number of ideas visible at one time

**Easy to use** – focus attention on the work, not the technology

**Broad compatibility** – work with all your applications and on any personal device you prefer or interactive display you own

**Flexible configurations** – choose the hardware configuration that supports the way you work

**Cloud-based service** – get all the latest updates immediately

**Solid-state illumination projector (ultrawide or full HD)** – enjoy 25,000 hours of carefree operation

**Warranty** – 3-year warranty on projectors, touch modules and image alignment modules

Don't just take our word for it. Experience the Span system for yourself today.
